Iryna Murashko

Senior Technical Writer | Documentation Engineer

Developer Documentation · API Documentation · End-user Documentation · Docs-as-Code

iryna.murashko7@gmail.com | LinkedIn

Technical Writer with 5+ years of experience creating and maintaining developer-facing documentation for B2B software products, focusing on API documentation, integration guides, and information architecture. Experienced in owning documentation workflows, planning improvements, and collaborating with distributed development teams.

My experience includes documenting APIs and SDK integrations, creating tutorials, how-to guides, troubleshooting procedures, technical references, and architecture diagrams. I take a hands-on approach to documentation, researching product functionality, testing APIs, working with code examples, and validating technical accuracy with developers. I work with Git-based Docs-as-Code workflows using Markdown, AsciiDoc, and Antora, as well as collaborative documentation platforms such as Confluence.

My background in customer support and project management also gives me a strong user-oriented perspective and experience translating technical information into clear, practical instructions.

I also have a background in translation and philology, with professional experience working across English, German, Ukrainian, and Russian. This has strengthened my attention to terminology, consistency, and clear communication.

After a period of freelance work, I'm returning to full-time technical writing and looking for a role where I can contribute to developer-facing and product documentation.

Docs Sample

Diataxis-structured samples - tutorials, how-to guides, references

Skills

Methodology

Technical Writing

Creating clear, structured, task-oriented documentation for developers and end users, from concept to publication.

</> Docs-as-Code

Writing and maintaining documentation in Git-based workflows alongside developers, using version control and review processes.

Information Architecture

Structuring documentation sets for discoverability, consistent terminology, and long-term maintainability.

Diataxis

Applying the Diataxis framework (Tutorials, How-to Guides, References, Explanations) to organize documentation.

API Documentation

Documenting REST APIs, testing endpoints, and validating request/response behavior to ensure accuracy.

Docs-as-Code Toolchain

Asciidoctor

Writing structured technical documentation in AsciiDoc syntax.

Markdown

Writing structured content in Markdown for docs-as-code workflows.

Antora

Building and maintaining documentation sites with Antora.

GitBook

Maintaining documentation sites with GitBook.

Hugo

Building and maintaining static sites with Hugo, including working with Hugo Modules and custom layout overrides.

Vivliostyle

Converting HTML/CSS documents to print-ready PDFs using CSS Paged Media.

Swagger

Documenting and testing REST APIs using the OpenAPI/Swagger specification.

RapiDoc

Publishing interactive API reference documentation from OpenAPI definitions.

JSDoc

Generating and maintaining API reference documentation from JavaScript source comments.

TypeDoc

Generating API documentation from TypeScript source code.

CLI

Using Bash and command-line tools for documentation builds, testing, and troubleshooting, including SSH access and file system operations.

Git

Working in Git-based documentation and code workflows, including branching and review.

Headless CMS

Updating content in a Git-based headless CMS via scheduled JSON update patches committed to the repository.

Diagramming

Architecture Diagrams

Modeling system structure and component relationships using architecture diagrams.

BPMN

Modeling business processes and workflows using BPMN notation.

Mermaid

Creating flow and sequence diagrams as code using Mermaid for docs-as-code workflows.

UML

Using UML diagrams to represent system structure and interactions in technical documentation.

CI/CD & Publishing

GitHub Pages

Deploying and hosting static documentation and portfolio sites via GitHub Pages.

Jenkins

Monitoring documentation deployment pipelines and troubleshooting build failures using Jenkins logs.

Collaboration & Workflow

Jira

Tracking and prioritizing documentation and support tasks in Jira.

Trello

Organizing tasks and workflows using Trello boards.

Confluence

Maintaining internal team documentation and knowledge bases in Confluence.

Remote Collaboration

Collaborating with geographically distributed teammates across countries, adapting communication and workflows to support effective remote teamwork.

SDLC

Familiar with the software development lifecycle and how documentation fits into release processes.

Agile

Working as part of an Agile team, participating in sprint planning, daily standups, and retrospectives, using a Kanban board.

Dev Basics

JavaScript

Basic working knowledge necessary to read code samples and test API behavior.

TypeScript

Basic working knowledge necessary to read typed code samples and make minor changes required for the documentation.

Java

Basic reading and troubleshooting of Java code for customer support cases.

PHP

Basic reading and troubleshooting of PHP code on customer sites (e.g., Laravel, Magento) in hosting support cases.

React

Reading and reproducing basic React components (e.g., widgets) to verify documentation accuracy.

HTML

Basic HTML for formatting and structuring documentation content.

CSS

Basic CSS for adjusting documentation site styling when needed.

JSON

Reading and working with JSON data structures for API documentation and testing.

YAML

Writing and maintaining Swagger/OpenAPI specifications in YAML for API documentation.

Postman

Testing and validating API requests and responses using Postman.

Technical Troubleshooting

Diagnosing and resolving technical issues for customers, informed by hands-on support and code-reading experience.

SQL

Basic SQL querying for data retrieval and troubleshooting, including working with databases via phpMyAdmin and SSH, and adapting existing queries to support documentation workflows.

AI-assisted Development

Using AI coding assistants to troubleshoot issues, refine HTML/CSS, and configure a Hugo-based CV website and its PDF publishing workflow, validating changes before implementation.

Languages

English

Advanced (C1) - primary working language for technical writing.

German

Upper-Intermediate (B2).

Ukrainian

Native / Bilingual.

Professional Experience

Self-employed 2025 - Present

Freelance 2025 - Present

Responsibilities:

- Helped software teams turn complex technical information into clear, structured documentation that developers and users can actually work with.

Zone 3000 Ltd. 2015 - 2024

Namecheap and Spaceship projects

Technical Writer 2019 - 2024

Responsibilities:

- Created and maintained developer-facing documentation for B2B software products.

- Managed documentation planning and priorities for two core development teams, assigned tasks, coordinated work, and reviewed deliverables to ensure quality and consistency.
- Independently researched product functionality, conducted structured SME interviews, and developed technical documentation, coordinating developer reviews through Git-based pull requests before publication.
- Documented APIs, product functionality, glossaries, workflows, tutorials, how-to guides, and troubleshooting procedures, translating complex technical concepts into clear, structured, task-oriented documentation.
- Created flow diagrams and structured documentation to explain complex processes and workflows, while maintaining documentation architecture, information structure, terminology, and consistency across product areas.
- Created and maintained documentation using GitBook and Antora (Markdown-based and Asciidoctor-based content), and API documentation using JSDoc, TypeDoc, Swagger, and RapiDoc.
- Validated technical documentation through API testing and hands-on implementation, including integrating an SDK as an npm package into a React widget and using its functionality to develop and verify code examples.
- Maintained internal team documentation in Confluence, keeping process and product knowledge organized and up to date.
- Created release notes in Confluence by adapting an existing SQL query to retrieve relevant completed tasks and turning incomplete or technical task descriptions into clear, user-friendly summaries of product changes.
- Contributed to establishing internal documentation style guidelines based on Apple, Microsoft, and Google writing standards, ensuring consistent terminology, tone, and formatting.

Achievements:

- Translated a Diataxis-based documentation strategy into a concrete architecture for the entire documentation site built for about 6 years (moving from a descriptive format to Tutorials/How-to/Reference/Explanation with DITA-influenced content modeling) and implemented it across the highest-priority content (~250 documents); received positive feedback from developers and other integrating team members.
- Trained and mentored a new Junior Technical Writer over ~9 months to transition ownership of one of the two core teams to her (including platform knowledge, tooling (Confluence, JSDoc), and the Diataxis framework) while reviewing her documentation and providing feedback.

Customer Support Representative 2015 - 2016

Responsibilities:

- Resolved customer complaints and technical issues via chat and ticketing systems for website and email hosting.

- Assisted customers with DNS, email client, FTP, and SSH configuration.
- Created customer-facing documentation and how-to guides on hosting, email, DNS, and related services for non-technical users.
- Supported minor website coding issue resolution for non-technical customers.

Under NDA 2018 - 2019

ConnectyCube project

Account Manager / Project Manager 2018 - 2019

Responsibilities:

- Supported customers implementing real-time communication solutions, including messaging, voice/video calls, and push notifications; provided onboarding and technical documentation.
- Managed customer projects and assisted with code implementation.
- Gathered customer requirements for new features.
- Created B2B customer-facing documentation and how-to guides on the real-time communication solution topics.

Injoit Ltd. 2017 - 2018

QuickBlox project

Customer Support Representative / Project Manager 2017 - 2018

Responsibilities:

- Supported customers implementing real-time communication solutions, including messaging, voice/video calls, and push notifications.
- Managed client projects and assisted with code implementation.

Gulfstream 2010 - 2015

Translation Agency

Translator/Interpreter 2012 - 2015

Responsibilities:

- Translated texts across diverse subject areas (tax, legal, medical, technical, educational) between English, German, Ukrainian, and Russian.
- Assisted customers who needed to call abroad.

Translator 2010 - 2011

Responsibilities:

- Translated texts across diverse subject areas (tax, legal, medical, technical, educational) between English, German, Ukrainian, and Russian.

AF "Roedl Audit" Ltd. 2011 - 2012

Audit Firm

Translator 2011 - 2012

Responsibilities:

- Translated texts, documents, and correspondence between English, German, Russian, and Ukrainian.
- Translated standardized legal and audit-report documents with fixed, formulaic wording - manually and using Trados (CAT tool) - maintaining terminological and structural consistency across repeated report formats.

Martin 2010 - 2010

Translation Agency

Translator 2010 - 2010

Responsibilities:

- Translated texts across diverse subject areas between English, German, Ukrainian, and Russian.

Education

V.N. Karazin Kharkiv National University

2005-2010

Master of Philology (German Language and Literature) qualified as a Philologist, Teacher of German/English, Translator (DE/EN)

Self-directed technical learning - Hugo, Vivliostyle, GitHub Pages; exploring DITA next

Publications:

- Documentation samples built with Antora and published via GitHub Pages
- CV built with Hugo and published via GitHub Pages
